AmeriCorps service year opportunity

My name is Darean Talmadge and I am reaching out to ask you to share an AmeriCorps service year opportunity with your students, caring for infants and children up to age six who are at risk for abuse and neglect in Houston, TX. Hands of Hope AmeriCorps members will serve these vulnerable children throughout a 12-month commitment, living in a private, gated community and receiving a $23,800 annual living allowance, paid bi-weekly.

Hands of Hope members will work collaboratively with other AmeriCorps Members in the home to ensure that children’s physical, emotional, and mental needs are met. While the commitment to our organization is only one year, the impact AmeriCorps Members have on the children in their care is lifelong. In turn, the children’s strength, resilience, and love will also make a lifelong impact on them.

We are currently accepting applications for the Fall 2023-Summer 2024 service year. Thank you in advance for sharing this opportunity with your students. An informational flier is attached, and our application can be found at: https://www.casahope.org/hands-of-hope-application

For more information, please contact Darean Talmadge 713-529-0639 dtalmadge@casahope.org

We are so grateful for your partnership.

Professor Assistant Position (Research and Professional Communication)

This position is intended to facilitate the research and professional communication of a Distinguished Professor of Psychology who has retired because of loss of eyesight due to glaucoma. The paid position involves 5 – 10 hours/week (proposed: 10% in-person/90% over the phone) involving the following activities:

● Taking dictation from the professor to be sent by email/other correspondence.
● Reading professional literature such as manuscripts to be evaluated for publication and hence are timely and typically of good quality.
● Reading specific articles from journals or from Handbooks including some from unpublished compendia that the publisher has requested evaluations from leading figures in Emotion and Developmental Psychology.
● Facilitate grant reviews and structuring letters of recommendation.

About working with Prof. Campos:
Work Opportunities – Week of June 19, 2023

- He is the recipient of a Lifetime Scientific Contribution for the study of Human infancy.
- He was recently noted as being in the top 1% of developmental psychologists by the Library of Congress.
- He is blind, but his mind is far from blind
- He has received two distinguished teaching contributions attesting to an ability to relate well to students.

What you'll get out of it:
- Rate offered is $20/hr + travel reimbursement for undergraduate seniors. Paid bi-weekly after filing an invoice/hours worked.
- Excellent opportunity to work closely with a distinguished faculty member and potentially publish with him.
- Previous students who worked with Prof. Campos say he was an active mentor, humorous and good-natured teacher and a pleasure to work with.

Hiring Postdoctoral Fellow at Northwestern University

The Cognition and Language Lab at Northwestern University, headed by Dedre Gentner, is seeking a postdoctoral fellow to collaborate on research on analogical processing and on how analogical skills can be improved.

Qualifications: Knowledge of analogical research and of cognitive processing in general; proficiency in experimental design & statistical analysis; excellent scientific writing skills. In addition, knowledge of linguistics, including corpus tools, is desirable. Knowledge of and/or experience with cognitive development is a plus.

Please provide three references.
Desired start date: Summer or Fall 2023
The official NU listing isn’t up yet. Please send an email to gentner@northwestern.edu

ACRC Position at UCSF: Dementia Imaging Lab

The Dementia Imaging Lab at UCSF is looking for a highly motivated Research Assistant to join our team! The RA should also be fluent in Spanish to communicate with a subset of our research participants.
The successful candidate will work on research projects focused on genetic variants associated with neurodegenerative diseases, such as frontotemporal dementia and Alzheimer’s disease.
