➤ Summer Session E: Psych 138 – Global Mental Health

Global Mental Health
Psych 138

Course Description
Global mental health seeks to alleviate suffering caused by mental disorders globally. Since the majority of mental health resources are concentrated in high-income countries, we focus on the mental health burden in low-resource settings. This course integrates the scientific evidence, cultural and contextual nuances, and interdisciplinary approaches of global mental health.

Robots in Global Perspective
Juliana Friend
Summer Session C | MTWR 2-4pm | 340 Moffitt Undergraduate Library

Robots will replace us. Robots will care for us in our old age. Robots are mere projections of the humans that make them. Each of these narratives has had a profound impact on how humans view themselves and their relationships with others. This course examines understandings of human-robot relations in a global perspective. By analyzing diverse social and political contexts, we will gain deeper insight into how worldviews get programmed into robots, and how robots shape our worldview.

We will explore a range of media from around the world, including:
- A fiction story about a music-loving robot guarding oil fields in Nigeria
- Contemporary films like *Ex Machina* and *I am Mother*
- An anthropological study of social robots and nationalism in Japan
- Case studies of humanoid robots built to improve road safety in Democratic Republic of Congo
- Tours of robotics research at UC Berkeley
- Anthropological studies of prosthesis
- Maga
- Contemporary artists pushing the boundaries of our imagination
- Critical examinations of robots, racism, and sexism

To think about human-robot relations, we must question taken-for-granted assumptions about "the human" itself. We often assume "the human" to be unchanging, universal, and clearly demarcated from the "non-human." Can we assume a strict boundary between human and machine, given prosthesis, medical devices, and myriad other ways in which fleshy bodies intertwine with diverse materials? If not, how might this change our vision of social interactions?

At the end of the course, students will choose between writing a traditional paper or writing a plan for a robot they would like to see in the world. How might you design a robot that fights racism in artificial intelligence systems? Or one that combats disinformation campaigns? How will this robot co-exist with, or reshape, "the human"?
Artists, engineers, and scholars often fall somewhere between two poles; robots are creatures, not things. Or robots are things, not creatures. By the end of this course, students will better understand both of these perspectives. However, we also ask, is it possible to sidestep this polarity as we envision alternative possible worlds?
